

DESCRIPTION

A-EPBP, A-204 – Equalizing Prong Assembly

The Equalizing Prong Assembly, when attached to a Lock mandrel assembly, converts the lock mandrel to a **blanking plug**, with equalizing device, capable of holding pressure differentials from above or below.

Equalizing Sub-Assemblies and a variety of sub-surface flow control devices may be attached to lock mandrel before running in based on their requirement and application.

APPLICATIONS

- Lock Mandrel with plugs holds pressure from above and below
- Setting and Locking Subsurface equipment
- Plugging of the String to set packers and other applications
